1. Anatomy of a Fueva Insight Card

Element	What It Means	How to Use It
Fueva Score (0-100)	AI confidence combining signal strength, source quality and high % conviction. Below 50 = use caution	
Fact % / Inference %	Verified data vs reasoned projection split	Higher fact % = more grounded signal
Risk Level	Low / Medium / High — tap for the reason	Match to your personal risk tolerance
Action Window	Days remaining before the signal expires	Act before countdown reaches zero
Action Badge	BULLISH / BEARISH / WATCH	Directional signal — not a guarantee
Target Price	AI projected price if the signal plays out	Use as take-profit reference only
Signals	3 specific data points driving the insight	Read these to understand the thesis
Sources	Clickable links to underlying data	Verify the thesis yourself before acting

2. Flash vs Daily vs Swing

Type	Window	Best For	Strategy
Flash Insights	4-12 hours	Active day traders	React quickly to breaking catalysts
Daily Insights	1-24 hours	Day traders	Trade the morning setup before it expires
Swing Setups	5-14 days	Swing traders	Enter on dips, hold through the window

3. Step-by-Step: Using a Fueva Insight

1. Check the Fueva Score

Only consider insights with a score of 65 or higher for actual trades. Lower scores are useful for situational awareness but should not drive capital allocation decisions.

2. Read All Three Signals

Expand the card and read every signal. Do you understand why the AI is making this call? If the thesis makes intuitive sense, your conviction should be higher.

3. Verify at Least One Source

Tap a source link and read the underlying article or data. This takes two minutes and confirms the insight is based on real events rather than AI hallucination.

4. Match to Your Risk Profile

If you are Conservative, skip High risk signals entirely. If you are Moderate, use position sizing to limit exposure on High risk signals.

5. Open TradingView

Check the chart for the ticker. Does the technical setup support the Fueva signal direction? Look for RSI, MACD, and key levels confirming the thesis.

6. Size Your Position First

Never risk more than 1-2% of your account. Set your stop loss level BEFORE entering. Know your maximum loss before you trade.

7. Set Alerts

Use TradingView alerts at your stop loss and take profit levels. Walk away from the screen. Let the trade work.

4. What Fueva Is NOT

Important Disclaimer

Fueva is an AI-powered research and analysis tool. It is NOT: a licensed financial advisor, a guarantee of profit, a signal service that tells you exactly what to do, or a substitute for your own judgment. Every insight is a starting point for your research — not a definitive answer. Fueva will sometimes be wrong. Markets are unpredictable. Always use stop losses and never invest more than you can afford to lose entirely.

5. Building Your Fueva Routine

The most successful Fueva subscribers follow a consistent daily process:

- Morning (pre-market): Open Fueva and review daily insights as they generate
- Check the Market Context bar for today's macro environment
- Review the Weekly Top Pick for highest-conviction setup of the week
- Star any insights matching your watchlist tickers in the Portfolio Tracker
- Open TradingView to verify the technical setup on your top 2-3 signals
- Set your position sizes and stop losses before markets open
- Evening: Review the Daily Recap to see which signals are playing out
- Monday: Check the new Swing Setups for medium-term opportunities
